

# **RIKA** **R EASY** **PLUS**

## **Bedienungsanleitung / manual**

## Transporthinweise

Die Maschine wird auf Palette bzw. in Kiste angeliefert.  
Zum Transport müssen die Gabeln des Staplers an den Innenseiten der seitlichen Kanthölzer angesetzt werden.

Zum Herunternehmen von der Palette sind nach Abnehmen der oberen Schutzhäuben an der Maschine 2 Seile durch den Bügel zu legen (siehe Abb.); dann die Maschine vorsichtig anheben.

Die Maschine ist mit 4 Bolzen auf der Palette befestigt; diese Bolzen sind vorher zu lösen.

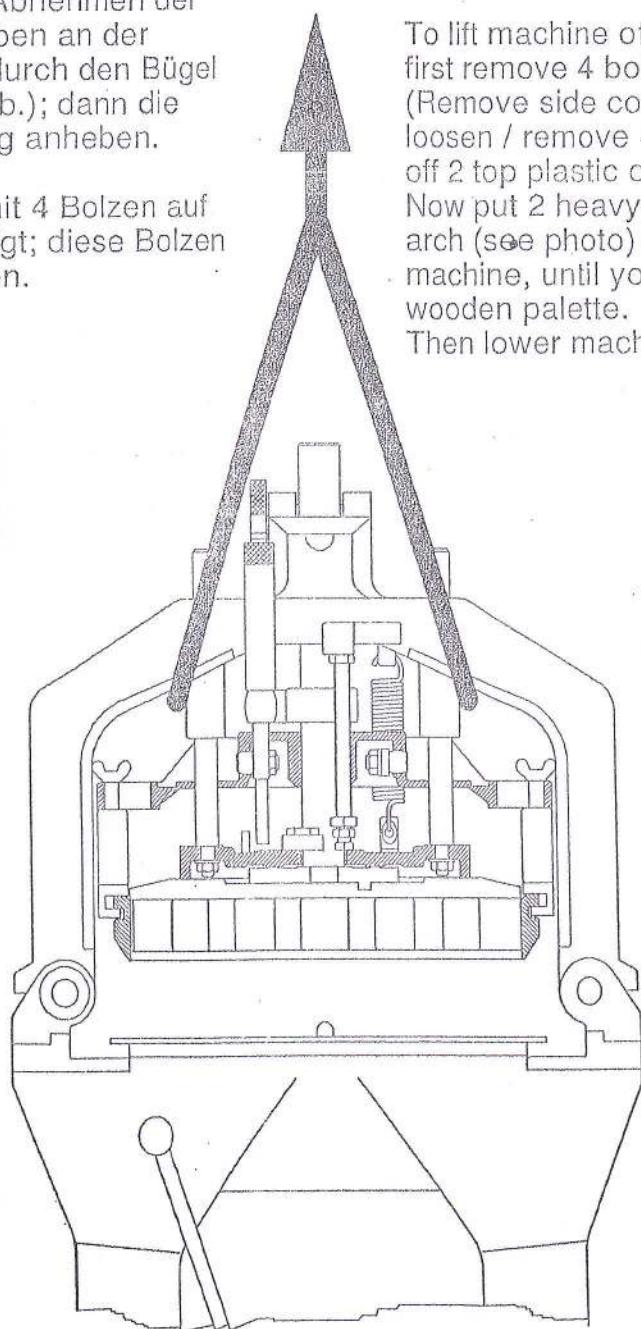

## Transportation Tips

Machine is supplied bolted on wooden palette, either wrapped in plastic sheet or in a wooden crate.

To move palette, you must place forks of fork lift just inside of wooden runners to keep proper balance.

To lift machine off palette you must first remove 4 bolts from palette (Remove side covers and then loosen / remove 4 bolts). Then take off 2 top plastic covers.

Now put 2 heavy cords around arch (see photo) and lift up machine, until you can remove wooden palette.  
Then lower machine unto floor.

# Achtung !!! Attention !!!

## Hinweis:

- Teller sind ohne Spiel im Bereich der Bohrung sowie der beiden Anschlüsse hergestellt.
- Falls die Teller sich infolge Ausdehnung nicht einlegen lassen, bitte im Bereich der Anschlüsse geringfügig durch Abschaben nacharbeiten.

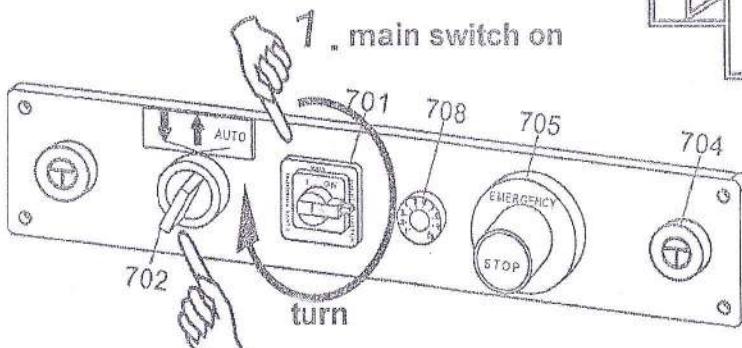

## Notice:

- Plates are without clearance in drilling zone and block zone.
- If the plates do not fit due to stretching please scrape off slightly in block zone.

## handling by newstart

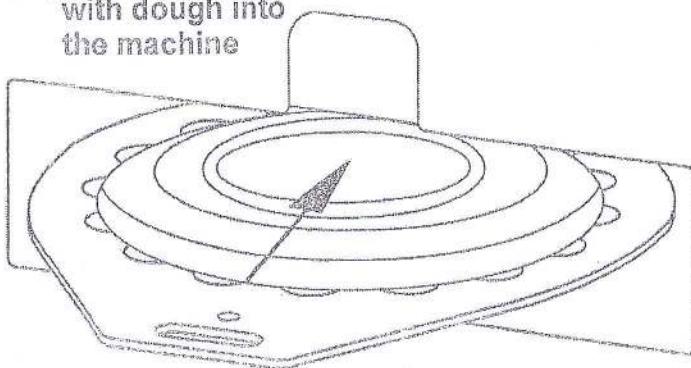

Easy PLUS  
short manual

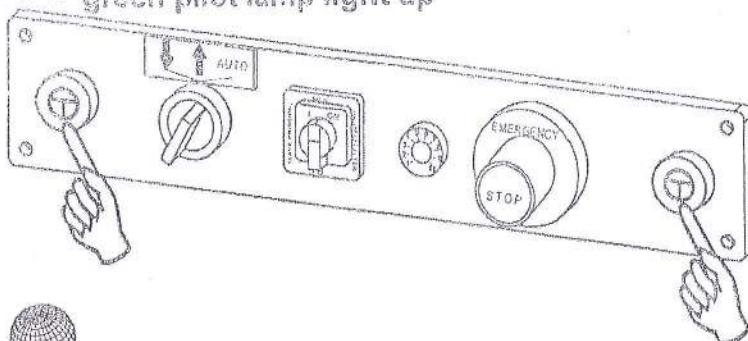

2. selection switch AUTO

3. put moulding plate  
with dough into  
the machine

5. press 2 start buttons until  
green pilot lamp light up

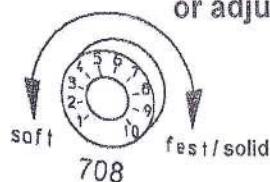

4.  
adjust kneading  
area height

6. actuate moulding lever  
when green pilot lamp light up

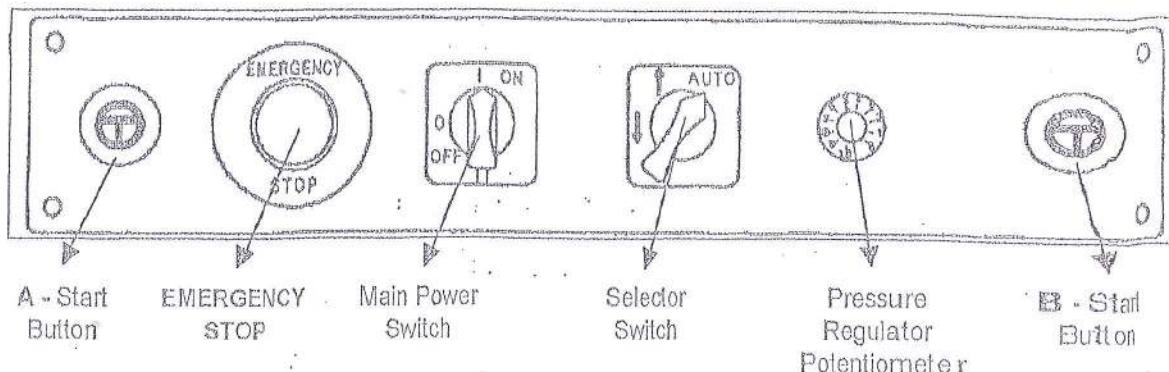

see other settings  
on our manual  
page 1-17

7. check dough (weight, look, size)  
maybe change press force with adjuster  
or adjust kneading area height

EASY - AUTOMAT  
OPERATING INSTRUCTIONS

1

**Start-up:**

1. Release Emergency Stop button
2. Turn Main Power Switch ON - Start Buttons "A" and "B" will light-up.
3. Turn Selector Switch to AUTO.
4. Set Rounding Cavity Height Set Screw (32) to a value between 1 and 10, and lock in place with the knurled lock-nut (73). The numbers on the set-screw are for reference only, they indicate the opening of the rounding chamber, 1 is the smallest opening and 10 is the largest.
5. Set the Pressure Regulator Potentiometer to a value between 1 and 10. ( 1-2 for very soft doughs 5-6 for medium doughs, and 9-10 for stiff doughs).

**Operation:**

1. Take a plastic rounding plate (S066) with the correct amount of dough, and place it on the Pressure plate (41).

**Caution :** Make sure the plastic rounding plate is seated correctly on top of the Pressure Plate, and between the guide-ridges at the back of the Pressure Plate, also the plastic rounding plate has to be engaged on the locking pin on the front of the Pressure plate. Failure to do so, will cause damage to the plastic rounding plate and/or to the knife assembly.

2. Press Start Buttons "A" and "B" simultaneously and hold until the yellow indicator lamp on top of the machine will light-up. ( During this phase, the head/knife assembly and the dough entrapment ring will travel down, press and distribute the dough on the rounding plate, then travel upward 3 mm. to relieve the pressure on the mechanism, to allow the knife assembly to be released.)

**NOTE:** If the machine does not operate as described in paragraph # 2, check if the Safety Guards are installed correctly and if the Emergency Stop switch is released.

3. As soon as the yellow indicator lamp is on, press the cutting handle (10) horizontally to the right, the knife assembly will cut the dough and the piston assembly will be pulled upwards by the springs (33) and stop at the rounding cavity height set-screw. The green indicator lamp will light-up signalling that the machine is ready to start the rounding phase.
4. Pull gradually the rounding lever (51) to the left and hold it for a pre-determined time (for standard doughs 2 to 3 seconds are sufficient).

**NOTE:** If the cut dough pieces do not have to be rounded, Just pull the rounding lever 1" or 2" and release immediately; the short jogging of the pressure plate will separate the dough pieces.

5. Release the rounding lever, it will return to its resting position, and the head assembly will travel upwards and stop at the ready position.
6. The green indicator lamp will turn off, retrieve the plastic rounding plate with the finished product.

## EASY - AUTOMAT

2

### CHANGING THE PISTON/KNIFE ASSEMBLY ON RH SERIES.

1. Press the Emergency Stop Button - but do NOT release.
2. Remove the front and back Safety Guards.
3. Remove the dough entrapment ring.
4. Insert the white plastic set-up plate.
5. Release the Emergency Stop Button.
6. Turn the Main Power Switch ON - Start buttons "A" and "B" will light-up.
7. Turn Selector Switch to .
8. Press Start Buttons "A" and "B" simultaneously and hold until the Piston/knife assembly reaches the white plastic set-up plate, release the buttons.
9. With a 22 mm. open end wrench, loosen completely the 2 hexagonal bolts that hold the piston/knife assembly in place. Remove the 2 bolts and store in a safe place.
10. Insert the 8 mm. Allen wrench (provided with the machine) in the groove on top of the piston, lock on to the screw and turn counterclockwise 2 or 3 turns only - do not remove the screw.
11. Turn Selector Switch to .
12. Press Start Buttons "A" and "B" simultaneously and hold until the carrier assembly reaches the top start-up position, release the buttons.
13. Remove the white plastic set-up plate with the piston/knife assembly. Store in a safe place.
14. Place the piston/knife assembly on the white plastic set-up plate and deposit on the Pressure plate.
15. Line-up the marks of the Piston/knife assembly with the corresponding markings on the set-up plate.
16. Turn selector switch to .
17. Press Start Buttons "A" and "B" simultaneously and hold until the carrier assembly is seated on the piston/knife assembly, release the buttons.
18. Take the 2 bolts removed in step # 9 and insert in the head assembly, tighten firmly with a 22 mm. open end wrench.
19. Insert the 8 mm. Allen wrench in the groove on the top of the piston, lock on to the screw and tighten firmly. Remove the Allen wrench.
20. Turn Selector Switch to .
21. Press Start Buttons "A" and "B" simultaneously and hold until the piston/knife assembly reaches the top start-up position. Release the buttons.
22. Check the bottom of the piston/knife assembly, the knives and piston should be flush; if not, go to steps 7, 8, 9 and 10 - then continue with steps 15 to 22.
23. Press the Emergency Stop Button - but do NOT release.
24. Install the dough entrapment ring.
25. Install the front and back Safety Guards.
26. Release the Emergency Stop Button.
27. Turn Selector Switch to AUTO.

EASY - AUTOMAT  
CHANGING THE PISTON/KNIFE ASSEMBLY ON QUADRO SERIES.

3

1. Press the Emergency Stop Button - but do NOT release.
2. Remove the front and back Safety Guards.
3. Remove the dough entrapment frame.
4. Insert the white plastic set-up plate.
5. Release the Emergency Stop Button.
6. Turn the Main Power Switch ON - Start Buttons "A"and "B" will light-up.
7. Turn the Selector Switch to: 
8. Press Start Buttons "A"and "B" simultaneously and hold until the piston/knife assembly reaches the white plastic set-up plate, release the buttons.
9. With a 22 mm. open end wrench, loosen completely the 2 hexagonal bolts that hold the piston/knife assembly in place. Remove the 2 bolts and store in a safe place.
10. With the 8 mm. Allen wrench provided with the machine, release the 4 screws (335) that hold the knife assembly to the H frame. Turn the screws 2 or 3 turns counterclockwise only - do not remove.
11. Turn Selector Switch to: 
12. Press Start Buttons "A"and "B" simultaneously and hold until the carrier assembly reaches the top Start-up position, release the buttons.
13. Remove the white plastic set-up plate with the piston/knife assembly, store in a safe place.
  
14. Place the piston/knife assembly on the white plastic set-up plate and deposit on the Pressure Plate.
15. Line-up the marks on the piston/knife assembly with the corresponding markings on the set-up plate.
16. Turn the Selector Switch to: 
17. Press the Start Buttons "A"and "B" simultaneously and hold until the carrier assembly is about to touch the piston/knife assembly - CAUTION - make sure all 4 knife assembly ears are lined-up correctly with the arms on the H frame, failure to do so will damage the knife assembly.
18. Press the Start Buttons "A"and "B" simultaneously and hold until the carrier assembly is seated on top of the piston/knife assembly, release the buttons.
19. Take the 2 bolts removed in step # 9 and insert in the head assembly, tighten firmly with a 22 mm. open end wrench.
20. With the 8 mm. Allen wrench tighten all 4 screws that hold the knife assembly to the H frame.
21. Turn the Selector Switch to: 
22. Press the Start Buttons "A"and "B" simultaneously and hold until the piston /knife assembly reaches the top start-up position, release the buttons.
23. Check the bottom of the piston/knife assembly, the knives and pistons should be flush; if not, go to steps 7 to 10 and 18 to 21.
24. Press the Emergency Stop Button - but do NOT release.
25. Install the dough entrapment frame.
26. Install the front and back Safety Guards.
27. Release the Emergency Stop Button.
28. Turn the selector switch to AUTO.

Machine operation:

- Main switch ON - Operate the knob switch, position ON, pushbuttons for two-hand operation illuminated white (READY FOR OPERATION).
- Selector switch AUTO - Set selector switch to position AUTO.
- Setting the kneading area height - The kneading area height is set by means of setting screw 32 and fixed with counter-sleeve 73. The numbers 1-10 serve orientation. Due to differing basic dough, no direct correlation between these numbers and the weight of the dough pieces (e.g. 4=40 g) can be derived.
- Inserting the dough plate - Insert the kneading plate with the dough into the machine.  
IMPORTANT: Insert the plate evenly; it must be positioned inside the machine between the front centering pivot and the rear centering elements, not atop them as, otherwise, the kneading plate and knife will be damaged!
- Activating the two-hand operation - Operate the two-hand operation keyboard until the yellow signal lamp illuminates. The piston unit now drives downwards and presses out the dough. CAUTION: If the work process does not start, check the seat of the protective hood secured by the sensors or whether the Emergency-STOP pushbutton has not engaged.
- Operating the released to cutting lever - The yellow signal lamp indicates that the cutting lever is now to be cut the dough. CAUTION: The cutting lever should be released immediately as, otherwise, the dough volume will rise to such an extent that the cutting lever can only be released using increased efforts or not at all.
- Operating the kneading lever - After attainment of the end position, the green LED switches on. Now, operate the kneading lever to knead the dough pieces to round shapes. *TIP: By lightly tipping the kneading lever, you can effect a mere separation of the dough pieces:*
- Removing the kneading plate - Shift the kneading lever back to its home position. The green LED extinguishes. You can now remove the kneading plate.

Controller for dough consistency: Depending on the dough consistency, you can individually adjust the pressing force: 0 – minimum\*

5 – normal\*

10 – maximum\*

\* The stated values are reference values which need to be individually adapted to the dough.

## Piston replacement for weight range adjustment or cleaning (type 1-4 & 6-11)

### Main switch ON

- Set the knob switch to ON. The pushbuttons for two-hand operation are illuminated white (READY FOR OPERATION).
  - Remove the front and rear protective hood.
  - Withdraw the enclosing ring.
  - Insert the piston replacement plate (8 mm, white plastic).
- CAUTION: Never use the white piston replacement plate for the work process!

### Selector switch ↓

- Set the selector switch to the position.↓

### Activating the two-hand operation

- Keep both pushbuttons pressed until the piston lies on the kneading plate.
- Completely unscrew the 2 hexagon bolts (SW22) from the piston.
- Loosen the clamping screw for knife fixation with the enclosed Allen key by drawing the tool along the groove of the piston. CAUTION! Only loosen the Allen screw. Never unscrew it completely!

### Selector switch ↑

- Set the selector switch to the position.↑

### Activating the two-hand operation

- Remove the piston replacement plate with the piston knife unit.
- Place the desired piston knife unit on the replacement plate, adjust it to the matching mark and insert the assembly into the machine.

### Selector switch ↓

- Set the selector switch to the position.↓

### Activating the two-hand operation

- Drive the toothed rack with the flange down until it firmly lies on the piston. The pivot automatically threads into the cross piece.
- Tightly fasten the clamping screws for the knife.
- Screw in the 2 fixation screws for the piston and fasten them.

### Selector switch ↑

- Set the selector switch to the position.↑

### Activating the two-hand operation

- Re-insert the enclosing ring.
- Attach the protective hood. CAUTION! NEVER OPERATE THE MACHINE WITHOUT PROTECTIVE HOODS!

## Piston replacement for weight range adjustment or cleaning (type Q1 – Q3)

Main switch ON  
operation

left and right

from the

knife in the

COMPLETELY

Selector switch

Activating the  
two-hand operation

Selector switch

Activating the  
two-hand operation

Selector switch

Activating the  
two-hand operation

- Set the knob switch to position 1, the pushbuttons for two-hand are illuminated white = ready for operation.

- Remove the front and rear hood.
- Remove the enclosing frame by pulling the two holders at the to the front.
- Insert the piston replacement plate (8 mm, white plastic).

- Set the selector switch to the position.

- Drive the piston down until it lies on the kneading plate.

- Completely unscrew the 2 fixation screws (hexagon SW 22) from the piston.

- Use the Allen key to loosen the 4 clamping screws for the cross piece. CAUTION: ONLY LOOSEN – NEVER UNSCREW THE SCREWS!!

- Set the selector switch to the position.

- Drive the machine back to the home position (top).

- Remove the piston replacement plate with the piston knife unit.
- Place the new piston with the knife on the piston replacement table and insert the assembly into the machine. CAUTION: BEFORE, when inserting the knife into the piston, assure that the numbers imprinted on the piston and the knife fixture are in flush!

- Set the selector switch to the position.

- Drive the toothed rack with the flange down and allow the cross piece to thread into the 4 knife retainers in the INCHING mode until the flange firmly lies on the piston.
- Tightly fasten the 4 screws for the knife.
- Screw in the 2 fixation screws for the piston and fasten them.

- Set the selector switch to the position.

- Drive the machine upwards to the home position.
- Re-install the enclosure frame.

## Cleaning without tool replacement

### Main switch ON operation

- Set the knob switch to position 1, the pushbuttons for two-hand operation are illuminated white = ready for operation.
- Remove the front and rear hood.
- Remove the enclosing ring or frame (Quadro = draw both holders to the front).

### Tilting the bracket into the

BRACKET

- Remove handle stud 36, screw the grab handle (115) bracket and laterally open it. CAUTION! DANGER! BE CAUTIOUS WHEN OPENING THE AS IT HAS A HIGH DEADWEIGHT!

### Selector switch

- Set the selector switch to the position.

### Activating the two-hand operation

- Drive the piston downwards to the end position.

### Cleaning

cleaning,

- Insert the supplied cleaning brush into the gaps of the piston and remove dough residues. TIP: Wait until the dough has dried! In a dry state, it can be removed more easily. To allow for a partial protrusion of the knife from the piston for pull the cutting lever (not EASY PLUS).

### Selector switch

- Set the selector switch to the position.

### Activating the two-hand operation

- Drive the machine back upwards to the home position.

### Tilting the bracket back

- Unscrew the grab handle.
- Install the handle stud.
- Re-install the enclosing ring or frame.

## Special equipment: EASY PLUS – automatic cutting lever

### Difference

- The EASY PLUS equipment merely features a green LED and does not accommodate a cutting lever (10).

### Operation

operate the

- The operation differs in one point only: Press the two-hand operation until the green LED illuminates. Now, the dough is completely pressed and separated. Now, simply kneading lever to start the kneading process. All other functions correspond to those of the standard version with mechanical cutting lever.
